

CS23331-DAA-2024-AIML / 1-Number of Zeros in a Given Array

1-Number of Zeros in a Given Array

Started on Monday, 8 September 2025, 2:00 PM**State** Finished**Completed on** Sunday, 21 September 2025, 9:25 PM**Time taken** 13 days 7 hours**Marks** 1.00/1.00**Grade** 10.00 out of 10.00 (100%)**Question 1** Correct Mark 1.00 out of 1.00 **Problem Statement**

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

Output Format

First Line Contains Integer – Number of zeroes present in the given array.

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2 int count(int arr[], int low, int high, int n) {
3     if (high >= low) {
4         int mid = low + (high-low) / 2;
5
6         if ((mid == 0 || arr[mid-1] == 1) && arr[mid] == 0) {
7             return n - mid;
8         }
9         else if (arr[mid] == 1) {
10            return count(arr, mid+1, high, n);
11        }
12        else {
13            return count(arr, low, mid-1, n);
14        }
15    }
16    return 0;
17 }
18 int main() {
19     int m;
20     scanf("%d", &m);
21     int arr[m];
22     for (int i = 0; i < m; i++) {
23         scanf("%d", &arr[i]);
24     }
25
26     int result = count(arr, 0, m - 1, m);
27     printf("%d\n", result);
28     return 0;
29 }
```

2-Majority Element

Started on	Monday, 8 September 2025, 2:10 PM
State	Finished
Completed on	Sunday, 21 September 2025, 9:26 PM
Time taken	13 days 7 hours
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 Flag question

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than $\lfloor n / 2 \rfloor$ times. You may assume that the majority element always exists in the array.

Example 1:

Input: `nums = [3,2,3]`

Output: 3

Example 2:

Input: `nums = [2,2,1,1,1,2,2]`

Output: 2

Constraints:

- ◆ `n == nums.length`
- ◆ `1 <= n <= 5 * 10^4`
- ◆ `-2^31 <= nums[i] <= 2^31 - 1`

For example:

Input	Result
3	3
3 2 3	
7	2
2 2 1 1 1 2 2	

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int majorityElement(int* nums, int n) {
4     int count = 0, candidate = 0;
5     for (int i = 0; i < n; i++) {
6         if (count == 0) {
7             candidate = nums[i];
8             count = 1;
9         } else if (nums[i] == candidate) {
10            count++;
11        } else {
12            count--;
13        }
14    }
15    return candidate;
16 }
17
18 int main() {
19     int n;
20     scanf("%d", &n);
21     int nums[n];
22     for (int i = 0; i < n; i++) {
23         scanf("%d", &nums[i]);
24     }
25     printf("%d\n", majorityElement(nums, n));
26     return 0;
27 }
28

```

	Input	Expected	Got	
✓	3 3 2 3	3	3	✓

Passed all tests! ✓

Correct

3-Finding Floor Value

Started on Monday, 8 September 2025, 2:10 PM

State Finished

Completed on Monday, 8 September 2025, 2:55 PM

Time taken 44 mins 15 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 Flag question

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n - Size of array

Next n lines Contains n numbers - Elements of an array

Last Line Contains Integer x - Value for x

Output Format

First Line Contains Integer - Floor value for x

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int findFloor(int arr[], int low, int high, int x) {
4     if (low > high)
5         return -1;
6
7     int mid = low + (high - low) / 2;
8
9     if (arr[mid] == x)
10        return arr[mid];
11    else if (arr[mid] > x)
12        return findFloor(arr, low, mid - 1, x);
13    else {
14        int floorRight = findFloor(arr, mid + 1, high, x);
15        if (floorRight == -1 || floorRight > x)
16            return arr[mid];
17        else
18            return floorRight;
19    }
20 }
21
22 int main() {
23     int n;
24     scanf("%d", &n);
25
26     int arr[n];
27     for (int i = 0; i < n; i++)
28         scanf("%d", &arr[i]);
29
30     int x;
31     scanf("%d", &x);
32
33     int result = findFloor(arr, 0, n - 1, x);
34     printf("%d\n", result);
35
36     return 0;
37 }
38

```

Passing the test cases for the provided input and output.

4-Two Elements sum to x

Started on	Monday, 8 September 2025, 2:29 PM
State	Finished
Completed on	Monday, 8 September 2025, 2:49 PM
Time taken	19 mins 46 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 Flag question

Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 void findPair(int arr[], int low, int high, int x) {
3     if (low >= high) {
4         printf("No\n");
5         return;
6     }
7     int sum = arr[low] + arr[high];
8     if (sum == x) {
9         printf("%d\n%d\n", arr[low], arr[high]);
10        return;
11    }
12    else if (sum < x) {
13        findPair(arr, low + 1, high, x);
14    }
15    else {
16        findPair(arr, low, high - 1, x);
17    }
18 }
19 int main() {
20     int n;
21     scanf("%d", &n);
22     int arr[n];
23     for (int i = 0; i < n; i++)
24         scanf("%d", &arr[i]);
25     int x;
26     scanf("%d", &x);
27     findPair(arr, 0, n - 1, x);
28     return 0;
29 }
```

5-Implementation of Quick Sort

Started on Sunday, 21 September 2025, 9:27 PM

State Finished

Completed on Sunday, 21 September 2025, 9:37 PM

Time taken 9 mins 55 secs

Marks 1.00/1.00

Grade **10.00** out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list—n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5	12 34 67 78 98
67 34 12 98 78	

Answer:

```

1 #include <stdio.h>
2
3 void swap(int* a, int* b) {
4     int temp = *a;
5     *a = *b;
6     *b = temp;
7 }
8
9 int partition(int arr[], int low, int high) {
10    int pivot = arr[high];
11    int i = low - 1;
12    for (int j = low; j <= high - 1; j++) {
13        if (arr[j] <= pivot) {
14            i++;
15            swap(&arr[i], &arr[j]);
16        }
17    }
18    swap(&arr[i + 1], &arr[high]);
19    return i + 1;
20 }
21
22 void quickSort(int arr[], int low, int high) {
23    if (low < high) {
24        int pi = partition(arr, low, high);
25        quickSort(arr, low, pi - 1);
26        quickSort(arr, pi + 1, high);
27    }
28 }
29
30 int main() {
31    int n;
32    scanf("%d", &n);
33    int arr[n];
34    for (int i = 0; i < n; i++) {
35        scanf("%d", &arr[i]);
36    }
37    quickSort(arr, 0, n - 1);
38    for (int i = 0; i < n; i++) {
39        printf("%d ", arr[i]);
40    }
41    return 0;
42 }
43

```
